# Why we believe it's a VERY real opportunity...

- **Daylighting Collaborative – potential MT effects**
- **Appleton School District – retrofit savings in the field**
- **DOE/NASEO Daylighting in Schools Field Research**

# Daylighting Collaborative

## Field MT Results

- No \$ for incentives
- Education/training and tech. asst. only
- Interim field evaluation based on self reporting of changes in design approach and attitude towards daylighting

# Survey results indicated architects and engineers:

- Are incorporating daylighting into some of their designs
- Have altered design elements as result of program's training and technical assistance
- View potential cost issues as a barrier
- Believe a program offering training, technical assistance and real-life examples of daylighting should continue

<b>Design Element</b>	<b>% of Respondents*</b>
<b>Placement of windows</b>	<b>70%</b>
<b>Characteristics of glass specified</b>	<b>65%</b>
<b>Amount of installed electric lighting</b>	<b>65%</b>
<b>Use of shading devices</b>	<b>57%</b>
<b>Use of daylighting controls</b>	<b>51%</b>
<b>Sizing of cooling system</b>	<b>24%</b>

*\*Pulled a sample of 89 from database of program participants*

# Appleton SD – Retrofit Savings from Daylighting

	Base case	Daylighting (with dimming)
<b>Lights</b> (kWh)	<b>2773</b>	<b>471</b> (83% reduction)
<b>Equipment</b> (kWh)	<b>890</b>	<b>890</b>
<b>Pumps/ auxiliary</b> (kWh)	<b>156</b>	<b>100</b> (36% reduction)
<b>Fans</b> (kWh)	<b>1216</b>	<b>1216</b>
<b>Total</b> (kWh)	<b>5035</b>	<b>3664</b> (27% reduction)
<b>Peak kW</b> (September)	<b>2.2</b>	<b>1.6</b> (27% reduction)

Before

After

# Daylighting – A Controlled Experiment

**Daylighting controls + high performance glazing =**

- reduced electricity for lighting
- reduced HVAC loads
- a more pleasant environment

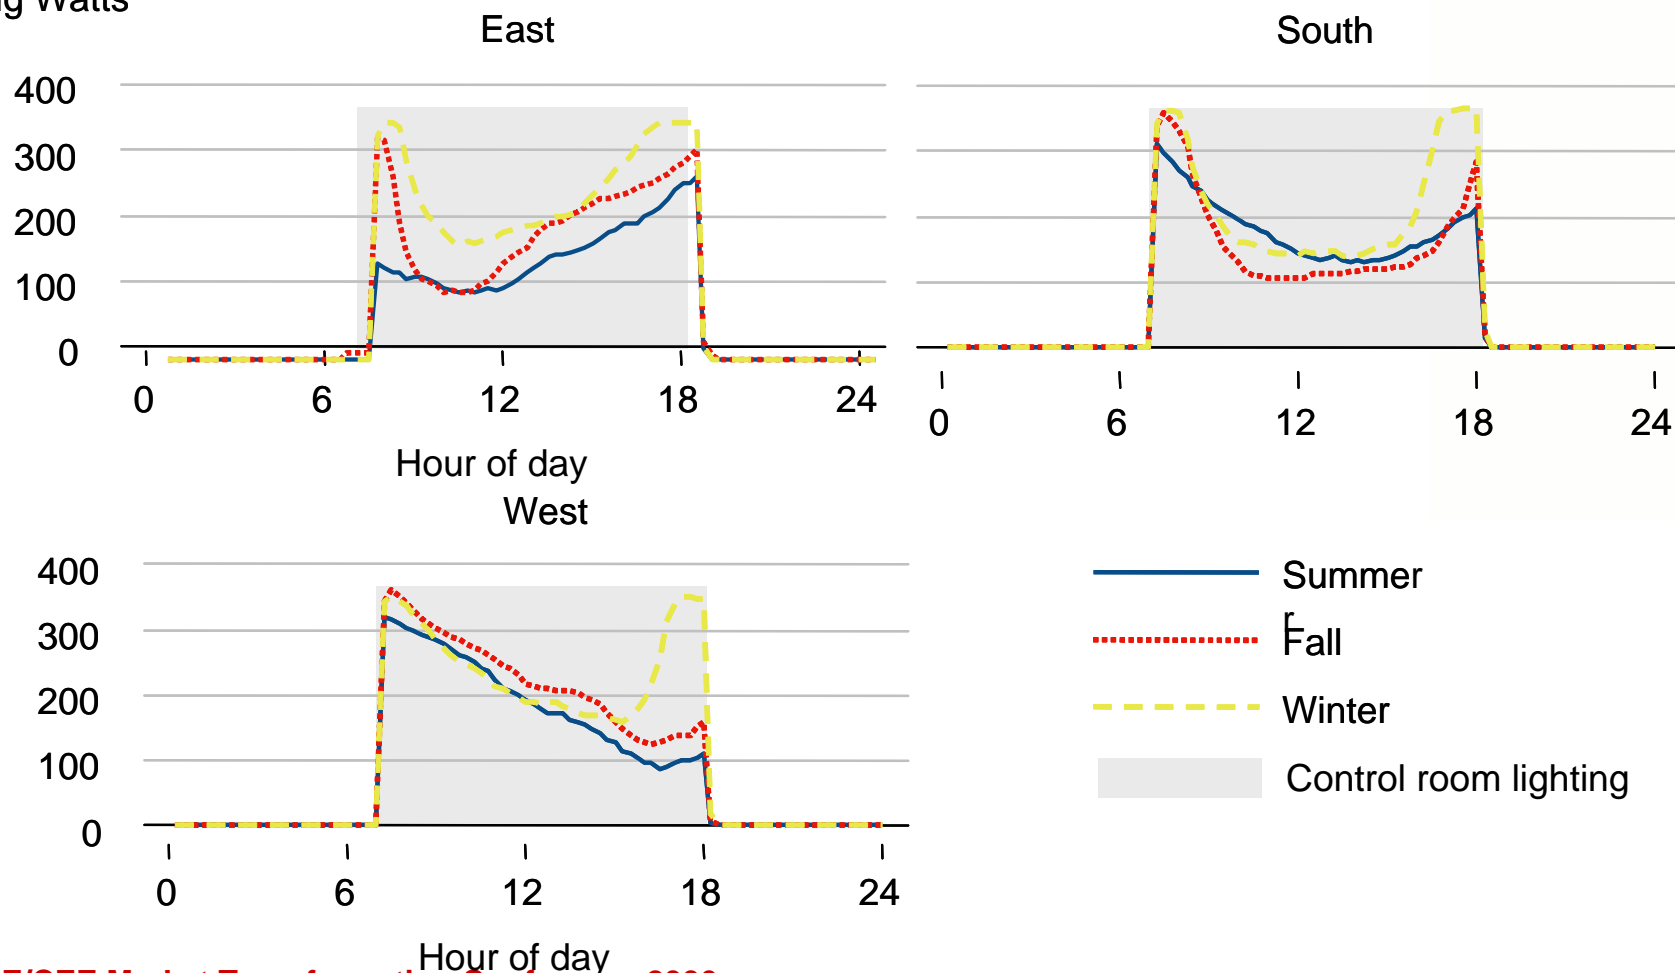

dimmable ballasts + light sensors to automatically adjust the level electric lighting in response to the available daylight

reduced visible transmittance (VT) to reduce glare, and reduced solar heat gain coefficient (SHGC) to reduce cooling load

# Lighting savings

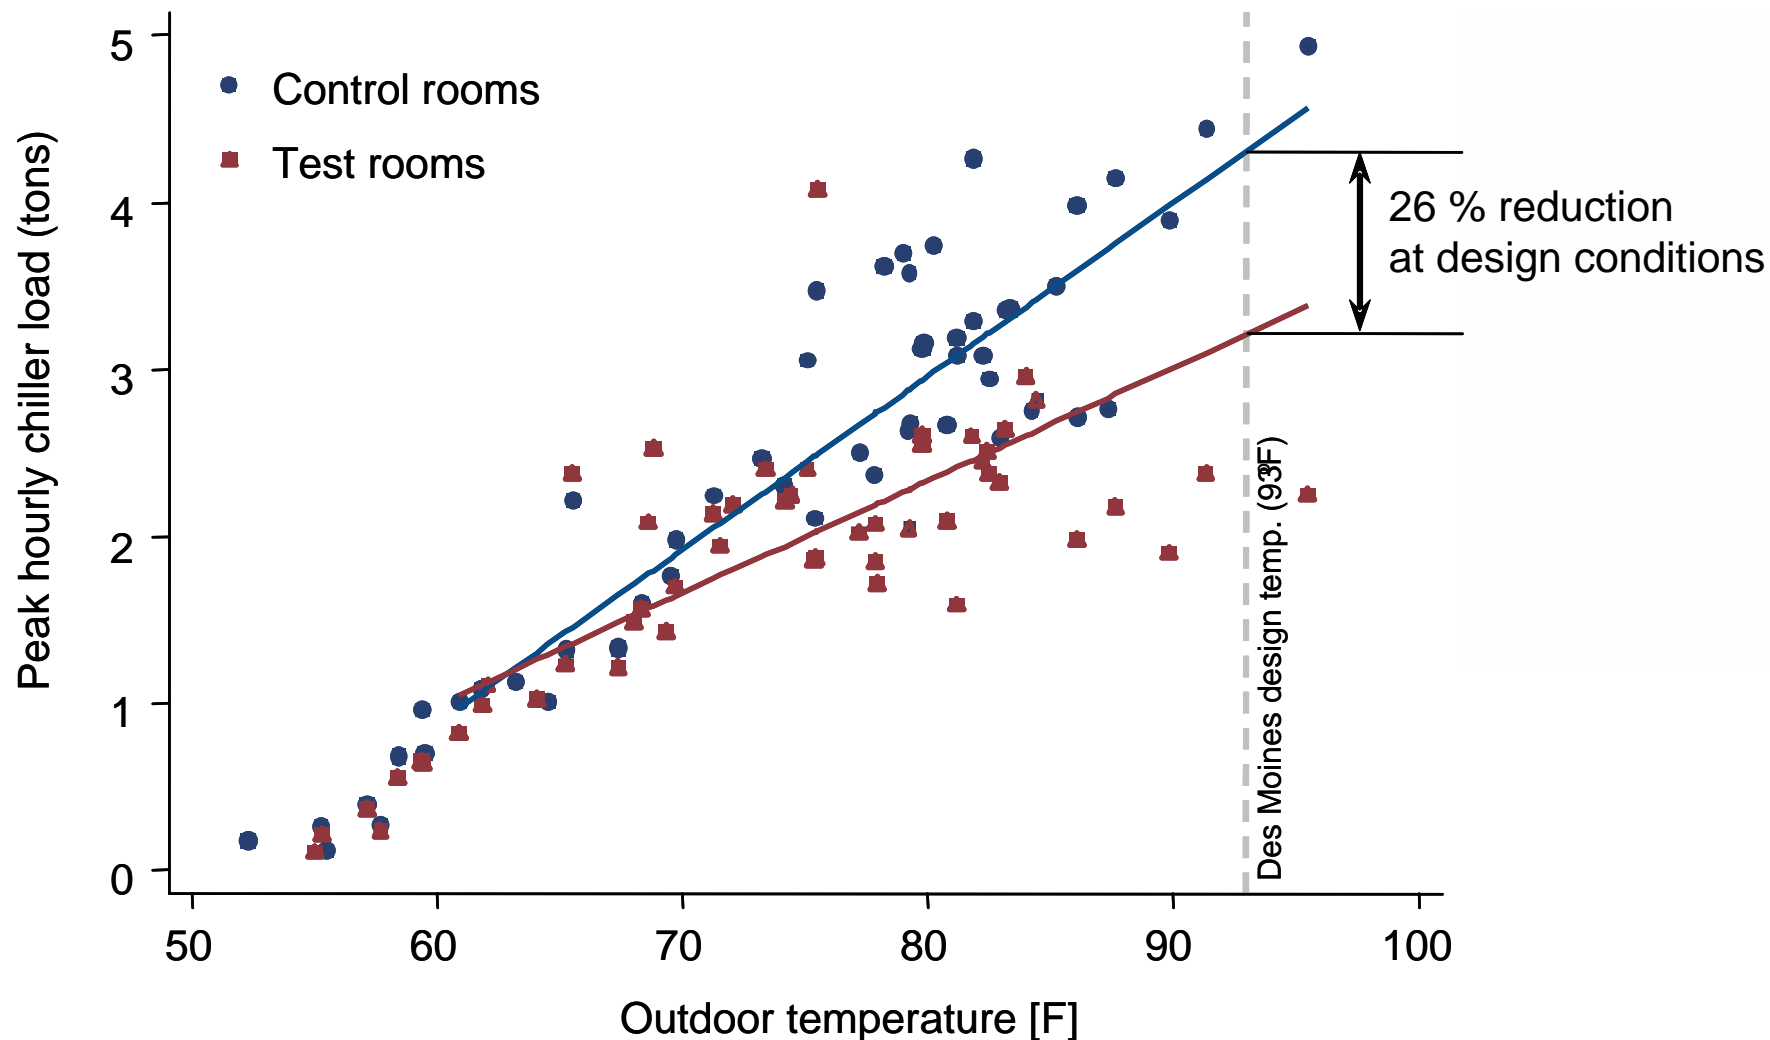

**Overall: 41% savings (32% incl. interior rooms)**

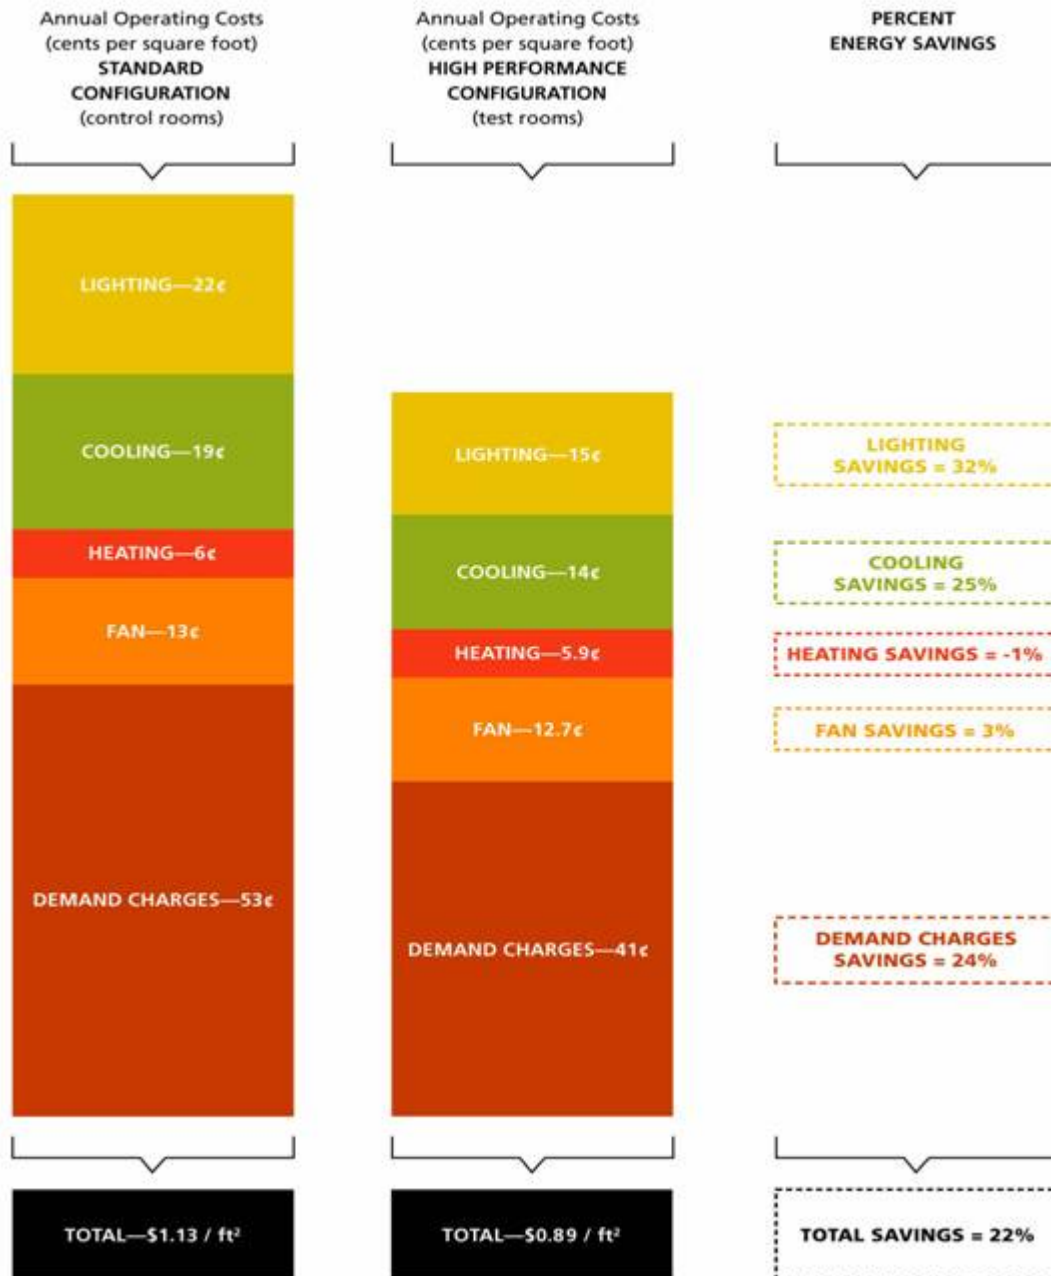

Lighting Watts

# Peak cooling load

- Only considering sidelighting – very conservative approach
- Due to time of day when usage decreased, significant demand reduction

# What could a program look like?

- Cannot take primary research and put in field
- More than one way to daylight a building – bldg type, climate and budget
- Use realistic examples for success stories
- Energy savings and human performance benefits
- Not “state of the art” but “straight off the shelf”
- Incorporate strategy of working with product manufacturers
- Mix of “incentives” - \$ measure, \$ design grant, technical assistance, local examples of success

Light  
every  
building  
with  
only  
the sky
