

RANK:

41

Oklahoma ranked 41st in the 2022 State Energy Efficiency Scorecard, scoring 5 points out of 50.

2022 STATE ENERGY EFFICIENCY SCORECARD

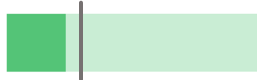

OKLAHOMA

Oklahoma's electric savings remain lower than the national average and are significantly limited by the ability of large customers to opt out of efficiency programs. Performance incentives are available for utilities and mechanisms are in place to address lost revenues resulting from energy efficiency; however, the state has no energy efficiency resource standard. Although Oklahoma has seen a reduction in vehicle miles traveled per capita and has a freight plan in place that includes strategies to promote an efficient freight network, the state has not focused its efforts on policies to encourage efficient transportation systems, leaving significant room for growth. Oklahoma has a healthy home services program to remediate barriers to weatherization but can increase its score by updating building energy codes and encouraging efficiency in the building sector.

SCORES BY POLICY AREA

State score: Remaining possible points: National median score:

Utilities:
3.5/15 points

Transportation:
2/13 points

Building Policies:
-1/12 points

Industry:
-0.5/2.5 points

Appliance Standards:
0/3 points

State-Led Initiatives:
1/4.5 points

EQUITY METRICS

How did Oklahoma incorporate equity across all efficiency policy areas?

- Points for efforts to advance equity within efficiency policies and programs
- Remaining points possible
