Mesa made some achievements, but because the city has few clean energy policies, it has room for improvement across all categories, particularly in local government operations. To address energy waste in municipal operations, Mesa can benchmark and upgrade municipal buildings and seek to convert streetlights to LEDs. The city can also work to make private buildings more efficient, encourage the decarbonization of the power system, and create a sustainable transportation plan to reduce vehicle miles traveled (VMT) citywide. These could serve as stepping-stones to a clean energy future.
