

PANEL 14: Display Presentations

This panel leverages various media, including videos, posters, software programs, and other graphical displays, to tell the story of how your work supports an efficient clean energy future.

The panel seeks content related to building energy efficiency in all sectors and across all fuel types. The panel encourages submissions addressing design, construction, or operations, and seeks to span the spectrum of building sizes and functions.

The panel encourages submissions with rich visuals and graphics and offers presenters an opportunity to engage with conference attendees in one-on-one or small group discussions, promoting in-depth conversations about presenters' work.

We value racial and social diversity and strongly encourage researchers and practitioners with various backgrounds to take this opportunity to exchange their ideas and experiences with the conference attendees at the poster session.
